

Four Post Rack System

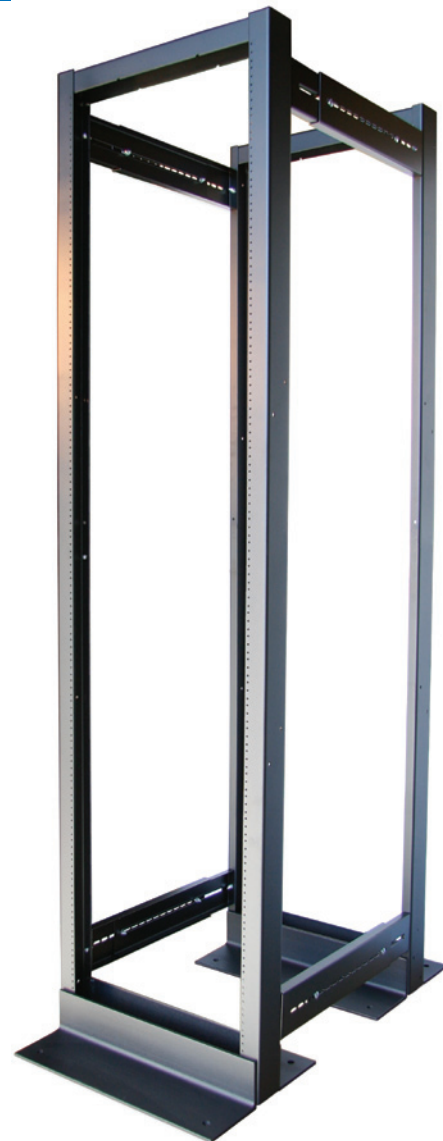

R. F. Mote Four Post Rack Assemblies provide the stability of a cabinet while maintaining the accessibility of an Open Frame Rack.

These Units are made up of *Two Relay Racks* and an *Adjustable Bracket Set* which *Joins* the racks together. The *Four Post Rack* is Depth Adjustable from 25 1/2" to 42" Rail to Rail.

Once Assembled, the unit allows for *Four Point Mounting* of equipment.

The brackets also act as depth members which facilitate the use of all of our **R. F. Mote 83" Cabinet Vertical Accessories**.

Four Post Rack Assemblies are well suited for used in *High Density* applications where they may be equipped with any of a number of R. F. Mote **Cable Management Solutions**, including our new High Density Cable Managers, Raceways, and Overhead Troughs.

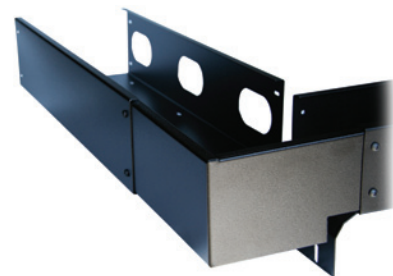

RFM-FPRK (Shown with Adjustable Bracket Set)

The *Modular Design* of the **Four Post Rack System** allows for easy expansion to suit ever changing network needs. With future expansion in mind, units may be added with ease.

RFM-FPRK (various Cable Management and Shelving options also shown)

Overhead Troughing has been designed with expansion in mind and may also be easily reconfigured.

Overhead Troughs are available for use from *Side to Side* and *Front to Back* of the assembly.

For *Added Security* and a clean appearance, **Four Post Rack Assemblies** may also be equipped with doors.
